# IoTeX starts Cooperation with Acria AIMARKET

Acria AIMARKET is a blockchain company that is developing blockchain solutions that make it possible to decentralize and democratize AI technology. Acria developed the novel Intellichain which allows the storage of AI training data on the blockchain with the goal to develop AI systems directly on the blockchain. Moreover, Acria is developing the Acria.AI marketplace, which is a decentralized marketplace to trade AI models and training data. The Token of Acria is AIMARKET. IoTeX has built their EVM-compatible blockchain from scratch using the innovative Roll-DPoS consensus and launched in 2019 April, which has been running by 100+ delegates worldwide and has processed more than 10 million transactions already. By integrating the IOTX Token into the Acria ecosystem, IOTX holders get access to new use cases. IOTX will be integrated in the Acria AI Marketplace.

Learn more about IoTeX IOTX

IoTeX is DePIN's only modular infrastructure platform connecting smart devices and real-world data to blockchains. IoTeX's middleware solution W3bstream provides the computation and verification of real-world data, bringing it on-chain while offering the modularity and customizability builders need to facilitate mass adoption. As the leading provider of DePIN infrastructure, IoTeX facilitates new rewards from devices and on/off-chain activity for users, turns personal devices into communal economies, and tokenizes the "data of everything." Backed by a global team of 60+ research scientists and engineers, IoTeX combines its EVM-compatible L1 blockchain, off-chain compute middleware, and open hardware to connect billions of smart devices, machines and sensors, and dApps across the physical and digital world.

Learn more about Acria's mission

In the era of artificial intelligence (AI), data has evolved into a cornerstone of unprecedented value. AI algorithms thrive on vast datasets to learn, adapt, and make increasingly accurate predictions. As AI technologies permeate various aspects of our lives, from personalized recommendations to autonomous systems,

the demand for high-quality, diverse datasets has surged. Data is the fuel that powers the machine learning engines, enabling them to discern patterns, recognize nuances, and refine their understanding over time. The symbiotic relationship between AI and data has elevated the significance of information to a strategic asset. Organizations and industries recognize that the quality and quantity of data they possess directly influence the efficacy of their AI applications. Therefore, Acria.AI is developing tools to democratize AI systems. We think the best way forward is to make AI systems accessible via public blockchains.
